

CTLGroup forms Strategic Alliance with Cibor Geoconsultants

Chicago, IL (August 8, 2014) – CTLGroup is pleased to announce Cibor Geoconsultants has joined CTLGroup in a strategic alliance to jointly pursue and execute complex engineering and materials science projects throughout the U.S. and globally. A particular focus will be serving private and public clients in the infrastructure, energy, and oil & gas sectors.

The CTLGroup/Cibor alliance will address problems for clients in forensic geotechnical engineering, cement based materials, structural assessment and structural health monitoring. “This strategic alliance will benefit clients by providing a new multi-disciplinary team approach. Many projects today involve engineering challenges that present a combination of complex geotechnical, materials, and structural issues,” said Senior Vice President Tim Tonyan, PhD. “Today’s energy and building industries are increasingly faced with challenges requiring a combination of geotechnical, environmental, materials and structural expertise. This alliance addresses those needs by providing a single source for the needed expertise, enabling integrated solutions to be developed that provide the opportunity to save time and money.”

[CTLGroup](#) is a global leader in engineering and materials science. The firm’s foundation originated almost 100 years ago as the cement and concrete technology research and development laboratories of the [Portland Cement Association](#) (PCA). In the 1960s, Construction Technology Laboratories (CTL) began providing consulting services for applied research projects and expanded its engineering consulting through the 1980s. In 1987, CTL was incorporated as an independent subsidiary of the PCA and in 2005, was rebranded as the company known today as CTLGroup.

Cibor Geoconsultants, based in Houston, TX, provides foundation engineering, geoforensics and litigation support, and other geotechnical consulting services. Together with Cibor Geoconsultants, CTLGroup can streamline project execution for the next generation of infrastructure projects.
